WORKING PAPERS

The Job-Market Paper:

- Multilateral Tariff Cooperation under Fairness and Reciprocity – with Costas Hadjiyiannis and Chrysostomos Tabakis (*Revision and Resubmission at Canadian Journal of Economics*)

Abstract: This paper explores the impact of fairness and reciprocity on multilateral tariff cooperation. Reciprocal countries reward kind behavior (positive reciprocity), but retaliate against countries behaving unkindly (negative reciprocity). We demonstrate that reciprocal countries that are moderately demanding from their trading partners regarding their commercial policy can support a greater degree of cooperation than self-interested ones. However, when only very liberal import policies are considered fair, then reciprocity could have a detrimental effect on multilateral tariff cooperation. Thus, our model provides a novel perspective on the role of expectations in trade negotiations.

Papers under Revision:

- International Environmental Cooperation under Fairness and Reciprocity – with Costas Hadjiyiannis and Chrysostomos Tabakis (*Revision and Resubmission at B.E. Journal of Economic Analysis and Policy - Topics*)
